

FLEXIBLE TRANSMIT VOICE TUBE

ABSTRACT OF THE DISCLOSURE

A hollow gooseneck or other flexible transmit voice tube for a headset for use in telecommunications, telephony, and/or multimedia applications is disclosed. The voice
5 tube may generally include a kink-resistant flexible tubular, e.g., gooseneck, member having an open end and an opposing end for coupling to a microphone, the flexible tubular member being bendable into a curvilinear operative shape and generally retains its curvilinear operative shape throughout its operative use until further adjustment is made thereto, and a lumen defined by the flexible tubular member extending between the
10 open and opposing ends for acoustic transmission between the open end and the microphone.
